

VIBRA**BOBBINS**

VibraBobbins are very versatile and can be ideal for a wide range of applications where simple and compact anti-vibration mountings are required. They are suitable for loads in shear, as well as in compression.

VibraBobbins are used in an extensive range of applications including compressors, generators, air conditioners, pumps, fans, motors, laboratory equipment, scales, etc..

Four configurations available for added versatility. Type TS can be used as a bumper or anti-skid plate.

*** Small quantities available from stock**
Quantity orders available in inch sizes
